ABOUT ME

Full Stack Developer focused on building scalable software and integrating AI-driven solutions into business workflows. Skilled in designing modern interfaces, developing robust backend architectures, and working with enterprise platforms. Passionate about software architecture, automation, and creating technology that delivers real value to organizations.

EDUCATION

Software Analysis and Development Technologist
SENA
2024-2026

SKILLS

- Full Stack Development
- Software Architecture & System Design
- Next.js, React, Tailwind CSS
- Python, FastAPI
- PostgreSQL (Advanced Data Modeling & Stored Procedures)
- REST API Development & Endpoint Design
- AI Integration (OpenAI, Local Models, RAG)
- Authentication & Security (JWT)
- SaaS & Multi-Tenant Architecture

LANGUAGES

- English: Basic
- Spanish: Native

EXPERIENCE

2025-2026 **AI Business S.L**
Full Stack Developer

- Developed full-stack web applications across frontend and backend environments.
- Trained and fine-tuned local AI models for document recognition and processing using RAG techniques.
- Designed and built enterprise-grade applications for document and workflow management integrated with third-party ERP systems.
- Created intelligent automation agents to streamline business operations and task assignments.
- Developed custom integration connectors for ERP and CRM platforms.
- Managed and maintained Linux-based server infrastructure.
- Participated in client-facing meetings to gather requirements and deliver solutions.
- Performed QA testing to ensure software quality and reliability.

2025-2025 **Indra Company**
Backend Developer

- Developed and maintained backend services using Java in enterprise environments.
- Implemented container orchestration and deployment workflows with Kubernetes.
- Implemented new features and optimized existing systems for performance and scalability.
- Managed and operated Linux-based server environments for application deployment.

PROJECTS

COMPRALO | SAAS PLATFORM

- Developed a SaaS platform adaptable to multiple clients.
- Designed and implemented a multi-tenant architecture with isolated databases.
- Implemented authentication and authorization using JWT.
- Developed an administrative dashboard with advanced analytics for decision-making.
- Designed modern and user-friendly interfaces focused on usability and operational efficiency.
- Integrated AI-powered features to support administrative and business processes.

LOCAL VULNERABILITY AI | OPEN SOURCE SCA & DEVSECOPS PLATFORM

- Engineered an open-source, local-first SCA and DevSecOps platform with Python (FastAPI) and React/TypeScript, correlating CISA KEV, OSV, and NIST NVD data via deterministic interval math without cloud code exfiltration.
- Built static OCI/Docker container layer scanning, multi-stage Dockerfile AST parsing, and automated compliance reporting in SARIF 2.1.0, CycloneDX, and SPDX formats for CI/CD runners.
- Integrated local LLM inference on localhost via Ollama (llama3.2) to provide contextual triage and remediation guides without external API fees or data leakage.
